In this project I use Laravel faramework

I use mysql for database

I programming 2 pages:

1-create page

2-compare page

 http://127.0.0.1:8000/products/ >>>>>>> show product list

http://127.0.0.1:8000/products/create >>>>>>>>> show create page

in this page I create 3 field :

name – price – description

and when click create send data of 3 field store in data base

http://127.0.0.1:8000/products/compare >>>>>>>> show compare page

in this page I create 2 field for selection of product and compare them

when click compare show the result of comparison of this 2 product

in the result include :name – price – description
